

Value Stream Mapping Course Outline

Lesson 1 | Value Stream Analysis

- Defining what the Value Stream is and why it should be mapped.
- How to use process flow mapping symbols to show the flow of the process - both the current state and the desired future state.

Lesson 2 | Streamlining the Value Stream

- Using the Value Stream Map to understand sources of waste and then to conduct a work analysis and then to create a macro workflow and finally a micro workflow.
- Focus on the characteristics of a lean value stream and how to build those into the future state.

Challenge

- An assessment of the learner's progress in this course.
